INSTRUCTIONS :

a) Gameplay - Tick Trumps is played in exactly the same way as Top Trumps. (If you do not know how to play Top Trumps, i) take a long hard look at yourself, and ii) look it up online.)

b) Categories:

i) *Accepted records (1950-2018)* - **SMALLEST NUMBER WINS** - the number of records officially accepted by the BBRC up to 2018 according to the BBRC website. The date of 1950 is chosen as it is the cut off date for category A records. The area covered is England, Wales, Scotland and Isle of Man (not Ireland, N. Ireland or the Channel Is.).

ii) *Date of last record* - **EARLIEST DATE WINS** - the latest accepted record taken from BBRC website. This means any record from 2019 onwards is not included, nor any record not submitted, nor any record classed as not proven.

iii) *Date of first record* - **LATEST DATE WINS** - the first accepted record taken from the BBRC website as well as the Birdguides website database. N.B for a few species with very old records, the exact first year is not certain.

iv) *Minimum distance travelled* - **FURTHEST DISTANCE WINS** - the measured distance, in a straight line, from the nearest breeding grounds to the site of the closest sighting. The breeding grounds locations were all taken from the distribution maps on the Birdlife International website, the closest sighting location from the Birdguides website.

v) *Grip factor* - **LARGEST NUMBER WINS** - this number is worked out using the number of listers who have recorded the species on their British List according to the BUBO Listing website. For example, 226 listers have recorded Red-breasted Nuthatch so that gets a 'Grip factor' of 50, whilst only 3 listers have seen Pallas's Reed Bunting so that gets a 'Grip factor' of 97. A bird which no one on the BUBO Listing website has seen gets a maximum score of 100.
